PROFILE

Principal software engineer focused on agentic AI, crypto tokenization and algorithmic trading, with 30 years of experience building the financial systems that firms run on. Has led the Portfolio Accounting platform (PPS) at Advisor360° and its predecessor firms since 2007, from the original design through making its critical applications multi-tenant. Also builds large projects from the ground up and delivers every layer end to end, from database to UI, working with AI agents; the portfolio is at **https://stas.boston/**.

EXPERIENCE

Principal Software Engineer · Advisor360°

April 2023 – Present · Needham, MA

Lead architect and technical leader across five mission-critical teams: Portfolio Accounting, Fee Billing, Product Master, PPS Technical Support, and the Modernization Squad, which he manages.

- Delivered multi-tenancy for critical applications across both the application and database layers, enabling secure client isolation and enterprise-scale onboarding, while leading cross-functional teams without formal reporting authority.
- Pioneered Azure Data Factory–based data synchronization for the multi-tenant architecture and designed a per-tenant code branching strategy that was adopted company-wide.
- Researched, prototyped and integrated Generative AI and agentic AI into internal workflows and developer tooling, improving engineering productivity and observability and informing modernization strategy.
- Directed the company-wide modernization effort, migrating legacy systems to cloud-native architecture using distributed processing, containerization and event-driven pipelines.
- Built high-performance pipelines for ingesting, normalizing and enriching large-scale financial data feeds, and distributed processing frameworks that handle massive daily transaction and valuation volumes with improved resilience.
- Automated database release processes, improving deployment consistency and reducing downtime risk.
- Building a Master Corporate Actions database, backfilled from legacy PPS, that populates new tenants first, with existing tenants switched over in a second step.
- Own on-call support for the platform and interview and evaluate engineering candidates.

Software Architect, Supervisor · Advisor360°

April 2019 – March 2023 · Weston, MA

- Scaled the platform to support MassMutual as a second enterprise client, moving it from single-tenant to multi-tenant architecture while preserving performance, security and reliability.
- Led the Portfolio Accounting, Fee Billing, PPS Technical Support and Rapid Refactoring teams.

CORE SKILLS

Architecture & leadership
Platform architecture, multi-tenant design, technical direction without formal authority, mentoring, hiring, on-call ownership

Data & cloud
SQL Server and T-SQL, SSIS, Azure Data Factory, Azure, data migration and replication, performance tuning, R, Python

Application stack
C#, VB.NET, .NET, ASP.NET MVC, web services and APIs, Flask, FastAPI, PHP, Perl

AI & emerging tech
Agentic AI development, Claude Code, Solidity and smart contracts, crypto tokenization, DeFi and digital assets, algorithmic trading

Domain
Portfolio accounting, corporate actions, General Ledger, multi-currency accounting, ERP and CRM

INDEPENDENT PROJECTS

contentedwife.org
Household-planning web app with a Vacation Planner and Job Finder.

preciousstone.info
Gemstones encyclopedia.

stas.club
Crypto hub.

https://stas.boston/
Blog on AI, crypto and money.

EXPERIENCE, CONTINUED

Software Architect, Supervisor · Advisor360° (continued)

- Engineered performance optimizations that absorbed 2× the data volume and nightly workload after onboarding MassMutual, with a significant reduction in batch processing times.
- Orchestrated the data conversion and onboarding of thousands of MassMutual advisors on an aggressive timeline, preserving the integrity of accounts, positions and performance history.
- Architected core modules with minimal dependencies on other teams, enabling fast issue resolution, upgrades and emergency interventions.

Software Architect, Supervisor · Commonwealth Financial Network

January 2011 – April 2019 · Waltham, MA · Software Architect 2011–2017, promoted to Supervisor 2017

- Technical lead and architect of the PPS Development Team (Portfolio Accounting System); as Supervisor, managed in-house developers and the consultant engineers and testers embedded on the team.
- Set programming standards, testing and deployment strategy, and coached developers through continuous code review.

Senior Lead Software Developer · Starpoint Solutions

October 2007 – December 2010 · New York, NY · contracted to Commonwealth Financial Network

- Designed and developed Preferred Portfolio Services (PPS) with full ownership of the Portfolio Accounting, Corporate Actions and Performance modules, and led the rollout and onboarding of all Commonwealth advisors to the new platform.
- Primary architect of core PPS components: stored procedures and functions, SQL tuning, data migration and replication, data-access APIs, and monitoring and administration utilities.
- Translated business requirements into technical specifications and reviewed code for flexibility, fault tolerance and reliability.

Software Architect · KingWater

September 2000 – August 2007 · Moscow, Russia

- Architected a multi-currency accounting, CRM and ERP system for a bottled-water manufacturer and distributor, integrating General Ledger with Inventory, Supply Chain, Logistics and Financial Back Office.
- Introduced GAAP-based accounting standards and cash-flow rules; built manufacturing resource planning analysis and an executive dashboard.
- Designed a multi-tier solution on TCP/UDP protocols with a Win Forms UI, replicated across headquarters, factory, store and secured-storage data centers.

Software Developer · Central Election Commission (Federal)

September 1998 – September 2000

- Built the election paperwork preparation software for the Federal Parliament Elections from the ground up, distributed to all involved parties, and similar software for the Federal Presidential Election.
- Created interactive ASP web pages for the official public website, including a state elections calendar and real-time vote result displays.

EDUCATION

Master's degree
Applied Mathematics and Applied Mechanics (double major)
Lomonosov Moscow State University
1996 – 2001

CERTIFICATIONS

Microsoft MCSE
Data Platform
Data Management and Analytics
Cloud Platform and Infrastructure (Charter)

Microsoft MCSD
App Builder (Charter)
Application Lifecycle Management
Web Applications
Azure Solutions Architect

Microsoft Specialist, 2015–2016
Cloud Data Platform Solutions
Big Data Analytics Solutions
Architecting, Developing and Implementing Azure Solutions
Programming in C#
HTML5 with JavaScript and CSS3

Coursework, 2015
Johns Hopkins: R Programming, Reproducible Research and more. Duke: Statistical Inference. Penn: Probability. Eindhoven: Process Mining.
